You've Got to Admire a Business that's Run *on the Square*

Every man in this house has got to be as square as men are made. This takes in everybody from the President to the office boy. He's got to be square every day in the year and every hour in the day. Cunning business tricks don't go here any more than downright dishonesty. And where every solitary man is strictly on the square, you can't get anything but a square deal. That kind of a principle can't be beaten.

That kind of spirit builds a business that lasts forever. Nothing on earth can shake it. It has made friendships for us that no power can jar loose. And we can't fool ourselves into the belief that any other plan is worth while. When everybody in this great institution knows that all the people he works with—and works for—are absolutely square—you have no idea of the good that results to you and to us.

Any act that is contrary to this "on-the-square" idea, we call a business crime. Any act that disturbs your relations with us, we term business insanity. The way that we avoid both is by keeping every promise we make to you and employing the kind of men who will help us keep the promise. This certainly makes at least one bright spot in your buying transactions.

The positive result of this policy is to make you know in your heart that every dollar you send to us buys its full dollar's worth in quality, service and satisfaction. It's worth money to you to know it. What more can you ask of any business man? Is anything more possible? We've followed this plan for forty-four years. And there is no sane reason why we shouldn't follow it "till the great day comes."

IT IS VERY EASY AND SIMPLE TO ORDER GOODS FROM THIS CATALOGUE

THE QUICKEST WAY to find what you want is to refer to the INDEX ON THE BLUE PAGES IN THE BACK OF THIS BOOK. WRITE YOUR ORDERS OR LETTERS TO US IN ANY WAY and in any language. Don't be afraid you will make a mistake. We will readily understand what you want. Our PRINTED ORDER BLANKS help you in making up your order. We want you to always have a supply of these blanks on hand. If you run out, just say, "Send more order blanks." If you have no order blanks, write on any piece of paper.

Sizes and Colors When things you select are made in different sizes and colors, you should always tell us the size or color you want just as you do when you buy goods over the counter.

How to Send Money You can send money by your Personal Check, if you have a bank account; by Post Office Money Order; Express Money Order; Bank Draft; or Cash, by Registered Letter. If you live on a rural route and desire to send Post Office Money Order, your letter carrier will buy the money order for you and will enclose and mail it to us with your letter. Simply give him the money and your letter He will do the rest. You need not go to the Post Office. We will guarantee the safe arrival of money sent in any of the above ways.

Safe Delivery of Goods We guarantee the safe delivery of the goods to you. If the transportation companies lose or damage any goods, we make it right with you and make the claim against them.

Suggestions About Shipping You can make the biggest savings by HAVING YOUR GOODS SHIPPED BY FREIGHT. Always try to order enough of the things to make 100 lbs. or more, because 100 lbs. don't cost any more freight than smaller shipments, and it makes the freight charge on each item very small indeed. If you do not have enough for 100 lbs., your neighbors are often glad of the chance to order with you because they, too, will save freight.

The New Express Rates are considerably lower than before. If you are in a hurry for some goods it is cheaper now to have them sent by express than before the rates were reduced.

Methods of Shipping All transportation charges are paid by the customer unless the item is quoted PREPAID. If you do not say how you want the goods shipped, we will ship it so that it will cost you the least money.

When You Order Goods Sent by Parcel Post be sure to send enough money to pay the postage in addition to the cost of the goods. If you send more than is needed, we refund it when your order is shipped. You may have any parcel insured by including in your remittance an additional 5c for a parcel valued at not over $25.00, or 10c, for a parcel valued at from $25.00 to $50.00. No parcel can be insured for more than $50.00, however. Quotations in our Catalogue give the weight of the goods, while pages 3 and 4 give information on Parcel Post rates, also Freight and Express tables.

Shipping in Plain Packages If you want your goods shipped in plain, unmarked packages, we will do so if you request it when you send in an order.

Factory Shipments Some of the heavy implements, vehicles, some heavy pieces of furniture and other heavy items are shipped directly from the factory to you. By so doing, we save handling and reshipping costs and give you the benefit by making the price just that much lower. You will make very large savings by buying these things shipped from the factory.

C. O. D. Shipments We discourage shipping goods C. O. D. Sending remittance in full to cover your order when you mail the order to us, is much less trouble and saves you needless expense. You take no chances, as our financial reliability is unquestioned, and we cheerfully refund your money, and any transportation charges on any goods not satisfactory. We will, however, ship goods C. O. D. if sufficient deposit is sent with the order, usually about one-fourth of the amount of the order.

The Head of The Family It is very helpful to us if you send all orders from your household in the NAME OF THE HEAD OF THE FAMILY. It avoids waste in sending out our Catalogues, and makes it easier for us to handle your business. It will please us very much if you will do this.

Returning Goods If you wish to return goods for any reason, you are at liberty to do so, because we want always to have you pleased. Correction of errors, exchanges, etc., will be done quicker and better if you will use whichever of the following plans that best fits the case:

1. Return small articles under 20 lbs. by Parcel Post. Please stick your letter on the outside of package and put a 2c stamp on the letter in addition to the postage on the package. You may mail your letter separately if you wish, but it will save time and trouble if you stick it on the package.
2. If you return goods by express, please put your letter inside the package.
3. If goods are returned by freight, mail your letter of instructions with the receipt, which the agent will give you, for the shipment. We will then settle the case without waiting for the goods to get here.

It is our policy to maintain the prices in our catalogue until a new catalogue is issued, but we reserve the right to follow unusual and extraordinary changes in the market.

Freight and Express Rates and Classification

We Always Pack and Ship Our Goods in Such a Way as to Secure the Lowest Freight Charges

RAILROADS CHARGE FOR FREIGHT ACCORDING TO ITS CLASSIFICATION—Classification varies according to the nature and value of the goods, their liability to damage in transit, and amount of space the article takes up when packed for shipment. Thus, vehicles which are bulky and require great care in handling, take from one to three times the first-class rate. Dry Goods, which, while they pack into a small space are of a more or less valuable nature, take first-class rate; and stoves, which are of a greater weight in proportion to the space they occupy and their value, take third-class.

CLASSIFICATION VARIES IN DIFFERENT SECTIONS OF THE COUNTRY—For example: Grist Mills take second-class rate in the Eastern and Western States and fourth-class in the Southern States, while Hardware takes second-class rate in the Western and Southern States, and third-class in the Eastern States.

EASTERN CLASSIFICATION—States East of Chicago and North of the Ohio River.
WESTERN CLASSIFICATION—States West, Northwest and Southwest of Chicago.
SOUTHERN CLASSIFICATION—States South of the Ohio River and East of the Mississippi River.

If the article you want is not shown in this list, take something of a similar nature which will most likely be in the same class. 1 Stands for First-class. 2 Stands for Second-class. 3 Stands for Third-class. 4 Stands for Fourth-class. 5 Stands for Fifth-class. 6 Stands for Sixth-class. K. D. Stands for Knocked Down. 1½ Stands for 1½ times First-class. D1 Stands for twice, or double First-class. 2½ Stands for 2½ times First-class. 3T1 Stands for three times First-class. 4T1 Stands for four times First-class. S. U. Stands for Set Up.

All the Territory Served from our Chicago House is represented in the following list of towns and from it you can figure the charges within a few cents on any bill of goods you may wish to purchase from Chicago. You don't need to lose any time in writing for freight or express rates, because if your town is not in the list, take the nearest town to you that is shown and use the rates to that place; the rate to your own station will not differ more than a few cents either way. If you have any difficulty, however, write us and we will cheerfully quote rates and give you exact figures on anything you may require.

How to Figure Freight Charges First find the weight of the article you desire (the weights on most articles in this Catalogue are given with their description) and refer to the list above and find what class of freight it takes. Then, in the table following, find the rate on that class of freight to your town or the nearest one to it, and multiply the rate by the weight, and the result will be the amount of freight charges, almost exact.

The Minimum Charge is the least amount for which a railroad will haul a freight shipment, no matter how little it weighs. It pays to build up your order to 100 pounds. In many cases you must pay the same freight as 100 pounds would cost whether you have that much or not.

To Towns Marked with a Star there is no regular minimum. The minimum to these places varies according to the class of freight and the weight of the goods. In most Eastern and Southern States it is the full first class rate. In States Northwest and Southwest of Chicago, it is the same as for 100 pounds of the class to which the article belongs

Express Classification

Groceries Only Take Second Class Express Rates, which are three-fourths of Charges on other Merchandise (Except very Bulky Articles)

First Class Express Rates for 100 lbs. are quoted below.

The Express Rates shown are for 100 lbs. Charges on smaller packages are proportionately lower and by following the example given below, you can figure the correct charges on any shipment weighing less than 100 lbs. When your shipment weighs over 100 lbs., to get the correct charge, merely multiply the weight by the rate. These rates are subject to change without notice.

How to Figure Exact Charges on any Express Shipment Weighing Less Than 100 Pounds

Deduct 20c from the express rate per 100 lbs. Multiply the remainder by the weight of your shipment. Then add 20c to the result of this multiplication, and you will have the correct charge.

For instance, to get correct charges on a 25-pound package to Omaha, Nebraska: Deduct 20c from the 100-pound rate ($2.25). Multiply remainder ($2.05) by weight of package (25 pounds). Your result is 51c. Add 20c to this result, and you have the correct charge (71c).

For Parcel Post Shipments, add sufficient postage. See Page 4 for rates

How To Use The Parcel Post

The Parcel Post is a convenient way to have your orders shipped if they do not exceed the weight limit, and especially if you are in a hurry.

Parcel Post packages will be delivered to your mail box if you live on a rural route. They will be delivered to your door if you live in a town having carrier service. Where there is no carrier service, Parcel Post packages are delivered to your local postoffice.

By combining what would be three or four separate Parcel Post shipments you can make up a good sized freight shipment on which the entire freight charge will be very little more, in most cases, than the Parcel Post charges on only one of the separate mail shipments.

How to Figure Parcel Post Charges

In the description of all articles in our Catalogue, we give the weight of each item. Your postmaster or rural mail carrier will tell you what zone you are in from Chicago. Then use the table below to find out how much the postage will be. Include this amount with your order, in addition to the regular Catalogue price of the goods. For instance, if you live in the fourth zone and are ordering a 10-pound package, you will see by the table below that you should include 43 cents to prepay the Parcel Postage.

It is very easy to figure the postage if you add up the total weight of the goods you order, and refer to the charges for the zone you live in.

Weight Limit Raised—Rates Lowered

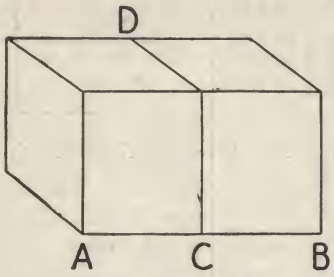
Fifty pounds can now be sent by Parcel Post within the first and second zone. The weight limit for all the other zones is 20 pounds. All merchandise weighing over 4 ounces, except books, that can be sent by mail, takes Parcel Post rates. Articles under 4 ounces cost 1 cent an ounce, no matter to what zone you send them. Anything over 4 ounces (except books), is figured at the pound rate, and the Parcel Post charge varies according to the zone you live in.

Books Can Now Be Sent by Parcel Post

Books weighing 8 ounces or less are charged for at the rate of 1 cent for each two ounces, or fraction thereof. Books weighing over 8 ounces take the regular zone rate the same as any other kind of merchandise.

How to Return Goods by Parcel Post

Return articles under 20 pounds by Parcel Post. Please stick your letter on the outside of package, and put a 2-cent stamp on the letter in addition to the postage on the package. You may mail your letter separately if you wish, but it will save time and trouble if you stick it on the package.



Important!

Be Sure to Include Sufficient Postage with Your Order If You Want It Sent by Parcel Post

We give the actual weight on all goods which can be conveniently and economically sent by Parcel Post. When you make out your order, add up all the weights of the different articles you want sent by Parcel Post. Then refer to the Table of Rates below, and add to your remittance for the goods the correct amount of postage.

Please follow this rule with every order you wish sent by Parcel Post.

Packages That Are Too Large, Cannot Be Sent by Parcel Post

If packages are too large they cannot be sent by parcel post, even if they are within the weight limit. In our Catalogue descriptions we give accurate dimensions of all goods so that you can tell pretty nearly what the size of the package will be. Allow for boxing and packing too. This is the way to measure a package to see if it can be sent by Parcel Post:

No. 1—Take the **length** of the package from A to B. **(Not around the package.)**

No. 2—Then take the measure of the package from C to D, **all the way around the package.**

Add No. 1 and No. 2. If the combined measure is 72 inches or less, the package can be sent by parcel post. Packages measuring over 72 inches **cannot be sent by parcel post.** Please keep this in mind when ordering parcel post shipments.

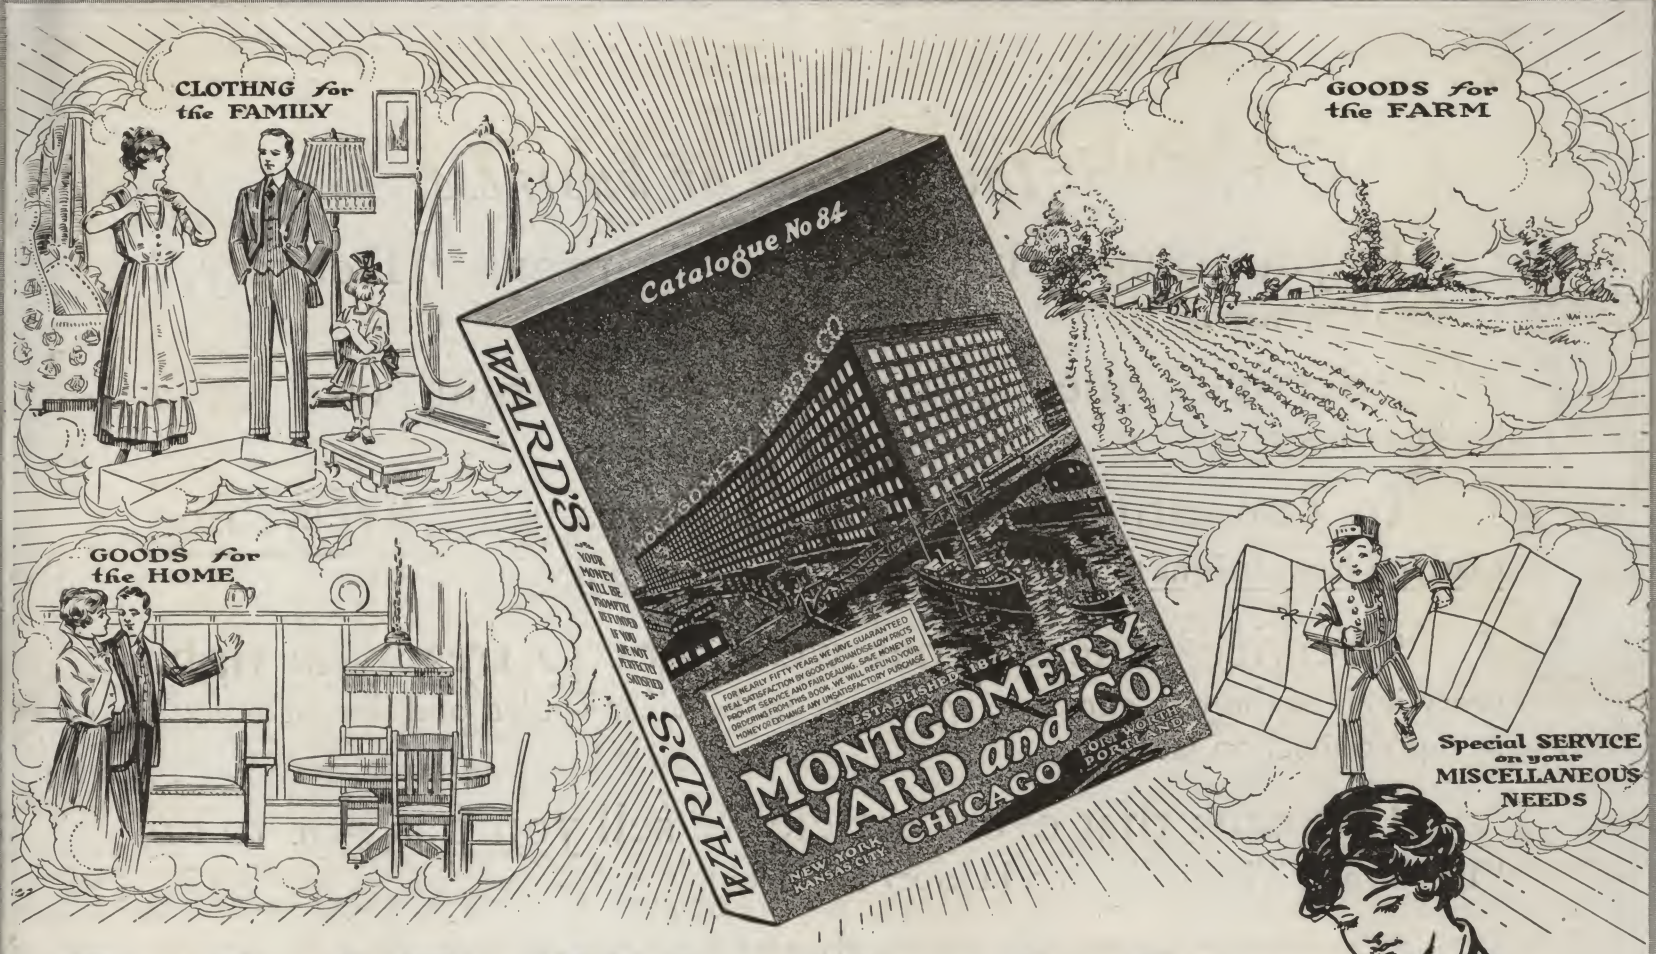
You May Insure Your Parcels

If you wish your goods sent by insured parcel post, please send sufficient money in your remittance to pay for insurance as well as postage. The cost of insurance is very low. We will insure packages valued up to $25.00 for 5 cents; and packages valued from $25.00 to $50.00 for 10 cents. No package can be insured for more than $50.00.

C.O.D. Shipments



C. O. D. Shipments—We do not recommend C. O. D. Parcel Post shipments. The postoffice will not allow you to examine the goods until you pay the postage, and it adds to the cost of the goods. You take no chances when sending the money with your order.

Prohibited Matter

Prohibited Matter—Intoxicating or alcoholic liquors, poisons, inflammables, or articles of an explosive nature are prohibited. Articles that might damage the person of mail employes, mail matter or equipment, are prohibited, unless protected.

Liquids

Liquids—Liquids, not in themselves of a poisonous nature, may be shipped in single glass bottles, if the weight does not exceed 16 ounces. If in bottles of 4 ounces or less, the total must not exceed 24 ounces, liquid measure. Liquids in sealed cans may weigh up to 11 pounds, but must be properly boxed and protected.

The Book That Makes Shopping Easy

Many big stores rolled into one lie in your lap as you read this. You sit in your easy chair and without exertion, you may go through the many departments selecting, at your pleasure, the merchandise you want.

There are no salesmen at your elbow

to urge you into buying something you do not need—no crowds to tire you—no shop worn goods. Throughout the land, in millions of homes, the same scene is being enacted—our Catalogue is the buying headquarters for families in every town and hamlet the whole land through.

The clear, consise descriptions will appeal to you.

Rather than fall into the error of saying too much, we prefer, often, to say less about an article than the article described really deserves.

And you'll like the departmental arrangement of this Catalogue.

We have tried to make it easier for you to find exactly what you are looking for, by arranging the lines of merchandise much the same as you would expect to find them arranged in an up-to-date store.

Buying from Us is Both Pleasant and Profitable

If it so happens that you have never dealt with us, we assure you that you can order anything in this book—as much of it or as little as you want—with the certainty of getting exactly what you ordered, with all bother of personal shopping left out.

Ten words from a satisfied customer is worth more than ten thousand

from us. Here are a few letters that indicate what some of our customers think of us.

30 Years' of Satisfaction

Have been dealing with Montgomery Ward and Company between 25 and 30 years, and in all that time have found them to be not only perfectly honest and square, but ready to go the "second mile."

Friends for 44 Years

You call us friends, and so we are. We and our families have dealt with you annually since the organization of your old original Grange Supply House, our parents having been charter members of the first "Grange" in Franklin Co. in which we now live.

Never a Criticism

"Never have I had a criticism to make. The excellence of your systems and the liberality of your dealings have always been a wonder to me and an unfailing source of comment to others by me."

Justice Demands I Write

I do not make it a practice to write testimonials, but I feel that justice demands that I write you one. I have been ordering goods from you for several years and in every case you have given me perfect satisfaction.

He Tells His Friends

You certainly treated me in much better way than I had any reason to expect. I have called the attention of several of my friends to this matter and showed them the difference between the way you have done and the way a local dealer would have handled the matter.

"Service" is the insides of business.

If you think that "Service" means "Delivery," you're dead wrong.

"Service" means more than anything else in a business house.

In our estimation "Service" means: "Everything that you have a right to expect when you send your order in."

"Service" means that we've got to treat you right every inch of the way and that we've got to be clean-souled and decent as long as our connection lasts.

It means that every article we sell you has got to be "up to snuff" in quality and in every last detail.

"Service" means the advantage of price, the best in the market at the price, better than you can find elsewhere for the same money and the ability and willingness of the house to either prove it or take the article back.

It means that every dollar you send us is as safe as it would be in a national bank and it isn't ours until you tell us that you are tickled to death with what it bought.

"Service" means honor, reputation, standing, decency, wholesomeness and every other old thing that you think it ought to mean.

Of course it means prompt and careful delivery. It means a consideration of your convenience. It means, when you send us an order, that we know you want it at the earliest possible moment. And the wonderful time-saving machinery in this institution helps us to fill the average order within a day—often in four or five hours.

"Service" means so many things that we haven't the space to tell them all. We know however, so far as we are concerned, there isn't anything that it doesn't mean and if anyone of the things it means is missing, you haven't got the "Service" that you have a right to expect.

Every man in our employ knows that "Service" means all these things. We have certainly spent time enough impressing the fact on the minds of our men. And any man who slips a cog has got to explain the slip in a manner that is entirely satisfactory to you and to us.

We've got a system that you will marvel at and whenever you happen to be in town, drop around and see it work. You'll talk about it for months afterwards and what's more we will enjoy meeting you.

Paint

Painting adds greatly both to the appearance and service of all buildings and farm appliances. One may buy ready-mixed paints, or may purchase paint pigments and oil and mix them. All surfaces should be clean and dry before they are painted. Use a priming coat made of equal parts of paint and linseed oil and cover with one or more coats of paint, which should be thoroughly rubbed into the surface.

Whitewash

Whitewash is the cheapest of all paints and may be used either for exterior or interior surfaces. It can be made by slaking about 10 pounds of quicklime in a pail with 2 gallons of water, covering the pail with cloth or burlap, and allowing it to slake for one hour. Water is then added to bring the whitewash to a consistency which may be applied readily. A weatherproof whitewash for exterior surfaces may be made as follows: (1) Slake 1 bushel of quicklime in 12 gallons of hot water. (2) Dissolve 2 pounds of common salt and 1 pound of sulphate of zinc in 2 gallons of boiling water; mix thoroughly; then add 2 gallons of skim milk. Whitewash is spread lightly over the surface with a broad brush or can be sprayed on with one of our whitewash sprayers.

Convenient Measure

One quart of wheat flour is one pound. One quart of cornmeal weighs eighteen ounces. One quart of butter, soft, weighs fourteen to sixteen ounces. One quart of brown sugar weighs from a pound to a pound and a quarter, according to dampness. One quart of white sugar weighs two pounds. Ten medium sized eggs weigh one pound. A tablespoonful of salt is one ounce. Eight tablespoonfuls make a gill. Two gills, or sixteen tablespoonfuls are half a pint. Sixty drops are one teaspoonful. Four tablespoonfuls are one wine glassful. Twelve tablespoonfuls are one teacupful. Sixteen tablespoonfuls, or half a pint, are one tumblerful. A barrel of rice weighs 600 pounds. A barrel of flour weighs 196 pounds. A barrel of pork weighs 200 pounds. A firkin of butter weighs 56 pounds.

Capacity of Cisterns

For a circular cistern, take the diameter in feet, square that and multiply by .785398; that gives the area in feet; multiply this by 1728 and divide by 231, and you will have the number of gallons capacity of one foot in the depth of the cistern. Multiply by the number of feet deep for total contents. If for a square cistern, multiply length by breadth, and proceed to multiply the result by 1728 and divide by 231 as before. Calculated in this way, we find that each foot in depth of a

Circular cistern,	5 ft. in diam. holds . .	4.66 bbl.
Circular cistern,	6 ft. in diam. holds . .	6.71 bbl.
Circular cistern,	7 ft. in diam. holds . .	9.13 bbl.
Circular cistern,	8 ft. in diam. holds . .	11.93 bbl.
Circular cistern,	9 ft. in diam. holds . .	15.10 bbl.
Circular cistern,	10 ft. in diam. holds . .	18.65 bbl.
Square cistern,	5 x 6 ft. holds	5.92 bbl.
Square cistern,	6 x 6 ft. holds	8.54 bbl.
Square cistern,	7 x 7 ft. holds	11.63 bbl.
Square cistern,	8 x 8 ft. holds	15.19 bbl.
Square cistern,	9 x 9 ft. holds	19.39 bbl.
Square cistern,	10 x 10 ft. holds	26.74 bbl.

In calculating the capacity of cisterns, etc., 31½ gallons are estimated to one barrel, and 63 gallons to one hogshead.

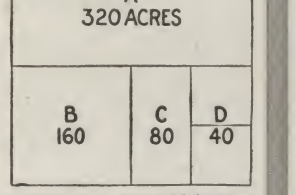
To roughly estimate the weight of stone—Multiply the length, breadth, and thickness in feet together, and multiply this by 150. The result will be pounds.

Size of Nails

The following table will show at a glance the length of the various sizes, and the number of nails in a pound; they are rated 3-penny up to 20-penny:



3-penny—1	inch	557 nails per lb.
4-penny—1¼	inches	535 nails per lb.
5-penny—1¾	inches	282 nails per lb.
6-penny—2	inches	177 nails per lb.

A township is 6 miles square, and contains 36 sections, which are numbered from the northeast corner of the township across to west and back on the second tier to east, then west again on the third tier, as shown in the diagram on the right.

Section 16 is designated as School Land; also section 36 in some of the new states.

The township lines running north and south are called Ranges, and are numbered east and west from a principal meridian. The townships are numbered N. and S. from an established Base Line.

This diagram represents a section of land and its subdivisions, described as follows:

A is the north half of the section, and contains 320 acres.

B is the southwest quarter of the section, and contains 160 acres.

C is the west half of the southeast quarter, and contains 80 acres.

D is the northeast quarter of the southeast quarter, and contains 40 acres.

Table of Wages

The column in the left hand of the table shows the number of days; and the rate per month is seen in the top line.

To find the amount of 19 days' work, at $11 per month, find 19 in the column of days, then move to the right on the same line till you come under $11 (the rate per month), and you find $8.04, the answer sought.

In all cases, the amount will be found directly under the price per month, and at the right of the given time.

The amount for 11 days at $9 per month, would be found to be $3.81.

In this table, the wages are cast at **26 WORKING DAYS PER MONTH.** For a fraction of a day, take an equal part of the amount for one day, and for rates less than $8 per month, half what is shown for twice the amount. Thus, at $6 per month, for 11 days, take half what the tables give for $12, that is, $2.54.

If the wages per month should exceed any provisions made in these tables, the amount may easily be found by taking double what is shown for half such wages.

Poisons and Antidotes

Send for a doctor at once. Don't delay. The following antidotes will be effective only when used immediately after the poison has been swallowed. They act as an emetic.

1. Acid—Carbolic, sulphuric, nitric, muriatic, ultro-muriatic, creosote, iodine, phosphorus.

White of egg well beaten up with water. A teaspoonful of mustard flour in a cup of hot water. Very thick lime water (in case of sulphuric, nitric, muriatic or nitro-muratic acids).

2. Chromic acid, chromatics, all preparations or compounds of chronium, antimony, copper, mercury or zinc.

Abundance of white of egg in water. A teaspoonful of mustard flour in water.

3. Ammonia, soda, potash, alkaline, silicates and sulphates.

Strong vinegar and water. Large doses of sweet or olive oil. Large doses of milk.

4. Prussic acid and its salts, all cyanides and sulpho-cyanides, oil of bitter almonds and nitro-benzine.

Continuous and heavy douches of ice cold water over the head and spinal column. Mustard plasters on the stomach and soles of feet. Prevent sleep.

5. Ether, petroleum, benzine, fruit essence, concentrated or absolute alcohol.

Plenty of mustard flour in large quantity of hot water. Cold water douches. Fresh air. Prevent sleep absolutely.

6. Compounds of baryta and lead.

A teaspoonful of mustard flour in warm water. Strong solution of Epsom salts in cold water.

7. Compound of arsenic. Paris Green, London Purple.

A teaspoonful of mustard flour in warm water. Plenty of sweet or olive oil, or milk, or some mucilaginous tea—say linseed.

8. Oxalic acid and its salts.

Very thick paste of lime and water by large spoonfuls at the time. After several of these, large draughts of lime water. Finally 4 oz. castor oil.

9. Nitrate of silver.

Large doses of ordinary kitchen salt dissolved in water, after which one teaspoonful of mustard flour in cup of warm water.

10. Corrosive Sublimate. (Bichloride of Mercury.)

Swallow thick paste of hot mustard.

11. Strychnine.

Black Coffee—Tobacco—Iodides—Artificial respiration.

Help in Case of Accidents

Drowning—1. Loosen clothing if any. 2. Empty lungs of water by laying body on its stomach, and lifting it by the middle so that the head hangs down. Jerk the body a few times. 3. Pull tongue forward, using handkerchief, or pin with string, if necessary. 4. Imitate motion of respiration by alternately compressing and expanding the lower ribs, about twenty times a minute. Alternately raising and lowering the arms from the sides up above the head will stimulate the action of the lungs. Let it be done gently but persistently. 5. Apply warmth and friction to extremities. 6. By holding tongue forward, closing the nostrils, and pressing the "Adam's Apple" back (so as to close entrance to stomach, direct inflation may be tried. Take a deep breath and breathe it forcibly into the mouth of patient, compress the chest to expel the air, and repeat the operation. 7. **Don't give up!** People have been saved after **Hours** of patient, vigorous effort. 8. When breathing begins, get patient into a warm bed, give warm drinks, or spirits in teaspoonfuls, fresh air and quiet.

Burns and Scalds. Cover with cooking soda and lay wet cloths over it. Whites of eggs and olive oil. Olive oil or linseed oil, plain, or mixed with chalk or whiting. Sweet or olive oil with lime water.

Lightning. Dash cold water over a person struck.

Sunstroke. Loosen clothing. Get patient into shade and apply ice cold water to head. Keep head in elevated position.

Mad Dog or Snake Bite. Tie cord tight above the wound. Suck the wound; be sure the skin of lips or mouth is unbroken. Cauterize with caustic or white-hot iron at once, or cut out adjoining flesh with a sharp knife. Give stimulants, as whiskey, brandy, etc.

Stings of Venomous Insects, etc. Apply weak ammonia, oil, salt water or lodine.

Fainting. Place flat on back; allow fresh air, and sprinkle with water. Place head lower than rest of body.

Bites and Stings

Bites and Stings will generally be remedied by a paste composed of equal parts of subnitrate of bismuth and glycerine. Treatment—If the part bitten shows any tendency to become inflamed, rub into it dilute carbolic acid—strength 1 part in 20. A piece of lint soaked in the dilute carbolic acid should be placed over it, covered with oiled silk, and secured by strapping. At the same time internal tonics will be required, and the bowels must be rendered active. The carbolic treatment is antiseptic. The acid, being absorbed, kills the germs and bacteria, and so prevents putrefaction; but it does not necessarily allay inflammation. If the inflammation appears to increase, the best method of treatment will be to make a poultice for the part. Take a known quantity of hot water and add to it one twentieth of its volume of strong carbolic acid; to this add one dram of tincture of opium, and with this liquid make the poultice.

Wasp and Bee Stings.—Examine the part with a lens, and the sting will probably be found. Remove it with tweezers. Rub in some dilute ammonia to 3 parts of water—and then apply ice. If ammonia is not at hand, chalk or carbonate of soda may be used, or any alkali. If ice cannot be had, a piece of lead, marble or stone may be used.

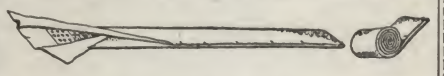
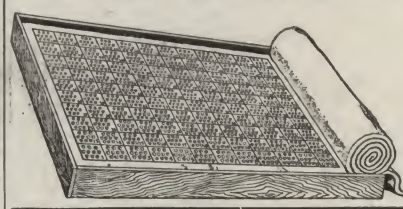
How to Test Your Seed Corn

Every Ear Planted Which Does Not Grow is Costing You Money



The average ear of seed corn has 800 kernels which, if all should grow, would produce 800 stalks which should produce 800 ears of corn. 800 ears of corn would make about 8 bushels. Figuring as low as 50 cents per bushel this would amount to $4.00. Therefore it is safe to figure that every dead ear of corn planted means a loss of $4.00 to you. If you plant only tested seed you can figure upon an increase of 10 bushels per acre or at least $5.00 more per acre in profits.

How to Test Seed Corn for One Acre in a Cloth



Take twelve of your seed ears, selected according to your best judgment, arrange them in a row where they will not be disturbed, or with a tack put a numbered slip on the but of each ear, numbering from one to twelve.

Take a piece of any kind of cloth, a yard or more in length and eight or ten inches in width; mark twelve 3-inch squares down the middle of the cloth, as per diagram, with a wax crayon pencil, and number each square and soak the cloth in water.

Carefully remove six to ten kernels in a spiral around the ear, taking them out with the tip of a pen knife from the edge of the kernel, being careful not to injure the germ.

Place them in numbered squares corresponding to numbers on ears. After dampening the cloth thoroughly roll up a little wet sawdust or sand in the end to help retain the moisture. Fold the cloth over the sides, as shown by diagram, and roll up as shown. Place the roll in a bucket or box of damp sawdust or sand, and put behind the stove or some place where it will not chill. It is best to keep the temperature about 70 degrees, more or less. At the end of five or six days the rolls may be opened, and you can learn from this simple test the condition of your seed corn.

How to Test for 10 or More Acres

Make a shallow box, two or three inches deep, and about 36 to 40 inches square. Mark it off twelve squares one way, by ten across. Fill the box about half full of moist dirt, sand or sawdust. Sawdust is preferred because it is lighter and can be handled in the house. Press it well down so that it will have a smooth, even surface.

Sanitary Hints

Remember that pure air is food, and that polluted air is poison.

2. Never allow the air to stagnate in your rooms or houses.

3. Provide for the constant ventilation of your rooms. One of the best ways of doing this is keeping the window a little down from the top.

4. Thoroughly air all sleeping apartments, beds, and bed clothes during the day.

5. Do not use for drinking or cooking, water which has long lain stagnant in cisterns or vessels.

6. See that the water cistern is cleaned out regularly, say every month or two.

7. See that there is no connection between the water cistern and the drain, and that the waste goes to the outside of the house.

8. Do everything in your power to have closets and sinks clean and sweet.

9. See that the private drains from closets are ventilated by pipe opening at the roof.

10. See that the private drains from closets and sinks are properly trapped, in order that the poisonous gases from the sewers may not get into the house.

11. The neglect of this precaution is a fruitful cause for many of the worst diseases, such as diphtheria, typhoid fever, etc.

12. When you need to use disinfectants, as after fever, etc., remember, that they do not cure the evil. The only remedy is the removal of the causes of impure air or water which have produced the evil.

13. In a case of sickness, all utensils, etc., should be kept scrupulously clean, and the precautions suggested above, as to maintaining a supply of pure air should be observed with redoubled vigilance.

1. **Eggs, To Pack to Keep for Own Use**—Dip the eggs into a solution of 2 oz. gum arabic in a pint of cold water, let them dry and pack in powdered, well-burned charcoal.

2. Immerse in sodium silicate (known as soluble glass), diluted four or five times with water.

3. Cover with salt.

Wire Rope, To Preserve—Apply raw linseed oil with a piece of sheepskin, wool inside; or mix the oil with equal parts of Spanish brown or lampblack.

To Drill in Glass—Use a steel drill with camphor and turpentine as a lubricant.

To Fasten Glass Together—Use litharge and glycerine. Rub up the litharge with sufficient glycerine to make a stiff paste.

To Draw a Rusted Nail or Spike—First drive it in a little, which breaks the hold, and then it may be drawn out much easier.

Rusty Screws, To Remove—Apply a red-hot iron to the head of the screw for a short time, then use a screw-driver while the screw is still hot.

Ants, To Destroy—Flour of sulphur, ½ lb.; potash, 4 oz.; set in an earthen vessel, over the fire, till dissolved and united. Afterward, beat to a powder, dissolve a little of the powder in water, and sprinkle in places infested by ants.

Red, To Destroy—1. Powdered borax sprinkled around the infested places will exterminate both red and black ants. Powdered cloves is said to drive them away. Another plan is to grease the plate with lard, and set it where these insects abound. They prefer lard to anything else, and will forsake sugar for it. Place a few sticks around the plate for the ants to climb up on. Occasionally turn the plate bottom up over the fire, and the ants will fall in with the melted lard.

2. Use a small amount of oil of turpentine, run into the cracks with an ordinary sewing machine oil can.

To Get Rid of Rats—1. If a live rat be caught and smeared over with tar or train oil, and afterward allowed to escape in the holes of other rats, he will soon cause all to take their departure.

2. Take a pan, about twelve inches deep and half fill it with water; then sprinkle some bran on the water and set the pan in a place where the rats most frequent. The rats fall through the layer of bran and drown.

Mice, To Destroy—1. Take 1 part calomel, 5 parts wheat flour, 1 part sugar and 1/10 part of ultramarine. Mix together in a fine powder and place in a dish. This is a most efficient poison for mice.

2. To keep seeds from depredations of mice, mix pieces of camphor gum in with the seeds. Camphor placed in drawers or trunks will prevent mice from doing them injury.

3. Gather any kind of mint and scatter about your shelves.

Vermin In Water—Go to the nearest river or pond, and with a small net (a piece of old mosquito bar will do), collect a dozen or more of the small fishes known as minnows, and put them in your cistern, and in a short time you will have clear water, the wiggletails and reddish-colored bugs or lice being gobbled up by the fishes.

Flies, To Destroy—1. Black pepper (powdered), 1 dram; brown sugar, 1 dram; milk or cream, 2 drams. Mix and place it on a plate or saucer where the flies are most troublesome.

2. Pour 4 parts of strained honey and 2 parts of vinegar into a common tumbler glass, and place in the glass a piece of cap paper, made into the shape of the upper part of a funnel, with a hole at the bottom to admit the flies. Attracted by the smell, they readily enter the trap in swarms, and by the thousands soon collected prove that they have not the wit or the disposition to return.

Square Rods and Feet in an Acre

An acre contains 43,560 square feet.

A plat of ground 208 feet and 8½ inches square is very nearly an acre, being 43,559 1/6 square feet.

A plat of ground 12 rods 10 feet and 8½ inches square is an acre. For ordinary purposes it will answer to take a plat 12 2/3 rods square, which will give 160 2/5 rods, 160 being an acre.

Short Statements of Business Law

Ignorance of the law excuses no one.

Contracts must be upon consideration to bind the parties.

Documents drawn with or signed with lead pencil are good in law.

A receipt is not conclusive evidence of payment.

Acts of one partner bind the others.

Contracts made on Sunday cannot usually be enforced. It depends on the laws of each particular State. The same is true of notes.

A contract made with a minor is voidable; with a lunatic is void.

Principals are responsible for the acts of their agents.

Agents are responsible to their principals for errors.

Each partner is responsible for the indebtedness of the firm.

A note given by a minor is voidable.

Notes bear interest only when so stated.

It is unnecessary to insert the words "for value received" on a note.

A note obtained by fraud, or from a person in a state of intoxication, cannot usually be enforced for value without notice, except in the hands of a bona fide holder. The laws of each State should be consulted.

A note lost or stolen does not release the maker; he must still pay the debt.

Notice of non-payment of a note should be served on the indorsers within twenty-four hours after its dishonor. Failure to notify an indorser in this time will usually exempt him from liability on his indorsement.

It is fraud to conceal a fraud.

A personal right of action dies with the person.

A written agreement proves itself.

Written evidence is preferred to oral testimony.

When a farm is leased, the seeded land and growing crops belong to the new tenant unless otherwise reserved by the lessor.

How to Find Interest Quickly

Interest at Six Per Cent
(See Table Below)

The principal, beginning at $1.00, will be found in the top line of the table. The time from one day to one year will be found in the left-hand column of the table. The interest required for the given time on the given principal will be found against the time contained in the table and directly under the principal.

If the interest on any given principal be required for a longer time than any provision has been made for in these tables, you have only to double the amount of interest shown for half that time. Thus, if the interest on $28.00 be required for two years and eight months, the table shows the interest for one year and four months to be $2.24; consequently twice that sum will be the interest sought. If the interest on months and days be required, add the interest for the given months and days together, and in like manner, for years, months and days.

To Find Interest at Any Other Than Six Per Cent

Rule: First find the interest at 6 per cent; then multiply this interest by required rate and divide by 6, which will be the interest required.

Seed to the Acre

The opinions of farmers differ materially, and then the climate and soil have much to do with the quantity. The quantity of seed sown broadcast to the acre is about as follows:

Wheat	1¼ to 2 bu.
Barley	1½ to 2½ bu.
Oats	2 to 4 bu.
Rye	1 to 2 bu.
Buckwheat	¾ to 1½ bu.
Millet	1 to 1½ bu.
Indian Corn	1 to 2 bu.
Beans	2 to 3 bu.
Peas	2½ to 3½ bu.
Hemp	1 to 1½ bu.
Flax	½ to 2 bu.
Timothy	12 to 24 qt.
Mustard	8 to 20 qt.
Redtop	12 to 16 qt.
Flat Turnip	2 to 3 lb.
Red Clover	10 to 16 lb.
White Clover	3 to 4 lb.
Kentucky Blue Grass	10 to 15 lb.
Orchard Grass	20 to 30 lb.

The quantity per acre, when planted in rows, in drills, is about:

Broomcorn	1 to 1½ bu.
Beans	1½ to 2 bu.
Peas	1½ to 2 bu.
Peanuts	1 to 2 bu.
Onions	4 to 5 lb.
Carrots	2 to 2½ lb.
Parsnips	4 to 5 lb.
Beets	4 to 6 lb.

Advice to Poultry Raisers

Setting hens should be confined to slightly darkened nests at hatching time and not disturbed unless they step on, or pick their chickens when hatching, in which case the chickens should be removed as soon as dry.

The brood coop should be cleaned at least once a week and kept free from mites.

Brood coops should be moved weekly to fresh ground, preferably where there is new grass.

A cornfield makes a fine range for young chickens, as they secure many bugs and worms and have fresh ground to run on, and have abundant shade at the same time.

Chickens are usually left in the incubator from 24 to 36 hours after hatching, without feeding, before they are removed to the brooder. The brooder should be in operation for a day or two, at the proper temperature before receiving the chickens.

Feeding Young Chickens

Young chickens should be fed from three to five times daily, depending upon one's experience in feeding.

Great care must be exercised not to overfeed young chicks that are confined, than those that have free range. Leg weakness is apt to result in those confined.

Chickens confined to small yards should always be supplied with green feed, such as lettuce, sprouted oats, alfalfa, or clover. The best place to raise chickens successfully is on a good range, where no extra green feed is required. Fine charcoal, grit and oyster shell should be kept before the chickens at all times. Cracked or ground bone may be fed where the chickens are kept in small barn yards. This feed is not necessary for chickens that have a good range.

A ton is 512 cubic feet in the mow, that is when it has settled down and become solid.

To Measure Grain in Bin

To measure grain in bins, multiply the length of the bin in inches by the width in inches, and that by the height in inches and divide by 2,150 for struck bushels, and by 2,748 for heaped bushels. The quotient will be the number of bushels contained in the bin.

Estimating the Amount of Material in Building

Lumber comes in even lengths usually 10, 12, 14 and 16 feet. It is figured at so much per 1,000 feet board measure, which means the number of square feet which the material would cover if it were 1 inch thick. To compute board measure, divide the area of the cross section of the stick of lumber in inches by 12, and multiply by the length in feet. The accompanying table shows the number of feet board measure, in lumber from 6 to 16 feet, with a cross section varying from 4 to 16 inches.

Boards less than 1 inch thick are usually sold at so much per square foot, the price depending on the thickness of the lumber.

In estimating lumber allow for waste as follows: Common sheathing add one-tenth for waste, and one-fourth for matched flooring and all kinds of siding. Wire nails are generally preferred in construction as they are easier to use than cut nails, although the latter have greater binding power. Use 10 to 20 penny nails for framing; 8 to 10 penny for sheathing; 6 penny finish or casing nails for clapboarding, and 8 penny for siding. Four penny nails are 1½, 6 penny are 2, and 8 penny are 2½ inches long, etc. It takes about 8 pounds of 5 penny nails to 1,000 shingles; 18 pounds of 6 penny for 1,000 square feet, board measure, of beveled siding; 20 pounds of 8 penny or 25 pounds of 10 penny, for 1,000 square feet of sheathing; 30 pounds of 8 penny for 1,000 square feet of flooring, and 15 pounds of 10 penny or 25 pounds of 20 penny for 1,000 feet of studding. Allow one bag of cement for about 13 square feet of concrete floor, adding one extra bag for every 10 running feet of foundation wall. This is estimated for a floor made 3 inches, of a mixture of concrete, composed of 1 part cement, 2½ parts sand, 5 parts crushed stone. Cover with one-half inch of a finishing coat, containing equal parts of sand and cement.

Valuable Hints for Auto Operation

These hints and suggestions are written for the purpose of serving as a genuine help to the auto owner. By carefully adhering to these instructions, you will be sure to secure maximum service from your tires, and avoid a great many of the troubles so commonly met with.

The most famous automobile drivers in the world, when off the race track, are slow and careful drivers. They don't take chances. Let your first lesson be that of learning to drive safely.

When shifting from high to lower speed, speed up motor with the clutch out so it will take up the lower speed without straining the driving mechanism. This is an important point.

When the car begins to skid, twist your steering wheel in the direction car is skidding and **do not** jamb on the brakes.

Pour the gasoline into the tank through a chamois skin strainer or "No Shammy" Funnel. Dirty gasoline causes a great deal of motor troubles.

Pour boiling hot water over the carburetor in real cold weather. You will get quicker action from the engine.

Don't use any more dry batteries than originally came with the car. They will not give a better spark and will give out sooner.

Battery terminals should always be kept clean. The dirt and verdigris which collect there are poor conductors of electricity.

Ordinarily the spark plug points should be about one thirty-second of an inch apart. A smooth silver dime makes a good gauge. If the batteries are weak the points can be closer together.

Extra spark plugs and batteries are as important on a trip as extra tires.

Don't try to mend a galvanized iron gasoline tank that leaks. It is safer and cheaper to get a new tank.

Several strands of fine wire is better than one single strand of heavy wire. The constant vibration is more apt to break the heavy single strand.

Never try to crank an engine downward against compression. To do so is apt to result in a broken arm.

Keep the cylinders clean. Carbon deposits in the cylinder get hot and are often the cause of the back-firing. Back-firing is a frequent cause of dislocated shoulders.

You can remove most of the carbon collections in the cylinders by pouring about a tablespoon full of alcohol into each cylinder while still hot and allowing it to stand over night.

A smoky exhaust will cause soot to collect, which often catches fire and causes back-firing or preignition.

Ignition troubles consist of:

Dirty spark plugs, cracked spark plug cores, broken connections, loose switch plugs, weak batteries, open switch.

Gasoline troubles consist of:

Empty tank, closed valve cocks, flooded carburetor, wrong mixture, leaky float, water in carburetor, dirty gasoline, leaky pipes, water in gasoline.

To find if there is water in the gasoline pour some on a knife blade and it will remain there after gasoline has evaporated.

Keep the spark plugs free from dirt and carbon deposits. These deposits kill the spark.

If the engine misfires examine spark plugs and all wires for a short circuit; see that the coil is in good condition; look for loose connections; inspect the vibrator; test the batteries.

Tire Advice

Don't speed when turning corners—slow down.

Use spark and throttle control as much as possible in operating your car. Apply the brakes only when necessary, and then very carefully.

Keep the wheels perfectly aligned.

Don't start the car with a jerk.

Look your tires over after every trip. Stop small cuts and cracks with the tire repair materials listed in this Catalogue.

Stop the car in such a position that the wheels and tires won't scrape the curbing when you start.

Avoid leaving your car on oily pavements or garages. Wipe off acids and oils as quickly as possible. An auto jack will keep the tires off the oily floors of garages, etc., and take off the continuous strain of the weight of the car. Change tires on your car—put the rear tires on the front wheels as soon as they show any great amount of wear.

Don't allow sand and grit to get into the tire fabric through cuts. Vulcanize the tire immediately with some good vulcanizing outfit, of which you will find many in this book.

Soapstone or tire powder will prevent chafing—use it before placing tubes in casing.

Reliners and casing protectors will add greatly to the life of your tire. A good reliner will often keep an old tire on the road long after its apparent usefulness is over.

Paint rims of wheels with graphite, to keep rust marks off inner tubes.

In going through heavy roads, or when climbing hills, retard the spark and open the muffler—this gives you much more power.

Coast down hills with your clutch thrown out. Never race the motor.

Graphite is better than oil. Use it on all gears and moving parts.

A Stitch in Time

Make it a point to take care of macadam stone bruises right away. Little cuts won't cause an immediate loss of air, but they leave the fabric exposed, and when water gets to it, the damage begins. The water gradually loosens the fabric, separates the tread from the carcass, and permits sand blisters. Dirt gradually creeps under the tread, exposing more of the fabric to moisture. In a short time the inner layers of fabric separate and permit a blowout. A tire that has been allowed to go so far is usually worthless. Take care of the little cuts early.

Be sure that your tires are inflated to the full pressure. This will keep them in best condition and eliminate a lot of tire trouble.

Riverside Tires get there—and get back, too.

Auto Oils and Gasoline

In describing these products the following technical terms are used:

Gravity of Oil means the weight of oil as compared with water. It is usually expressed in degrees. The higher the degree the lower the gravity, or body of oil. An oil of low gravity or heavy body is usually desirable as a lubricant.

About 27.2 is the proper gravity in the average case. Higher gravity won't feed well and lower gravity is not heavy enough to give best results.

Flash of Oil is the temperature at which oil will give off little flashes if a burning match is placed close to the surface. The determination of the burning point is essential, as it furnishes information as to the amount of lighter oils present. Oils having too low a flash point are dangerous to use.

About 390 is about as low as the flash point should be.

The Fire Test of Oil establishes the degree of heat at which oil will burn. At this point the oil begins to decompose, and soon loses its lubricating qualities and value.

The right kind of oil will not burn below 420.

The Cold Test of Oil shows the lowest degree of temperature at which it will flow at all. It does not affect the lubricating qualities of the oil but an oil of low cold test is more desirable for winter use.

Viscosity of Oil represents the fluidity or internal friction. An ideal lubricant is one with high viscosity, one that has the greatest adhesion to surfaces. The test is usually made by comparing the length of time in which a given quantity of oil will flow through a certain orifice at a stated temperature. The rating is expressed in seconds of time.

225 at 100 degrees is as low as the viscosity should be to give the best results.

Gasoline. The main thing about gasoline is the gravity. The best gasoline for general motor use is from 62 to 64 gravity. Higher than that, while it gives greater power, requires too much gasoline for the power you get and in comparison to the price paid. Lower than 62 shows that the gasoline contains too much oil and will deposit too much carbon. The Fahrenheit scale is used in testing all your oils.

The Fall and Winter Fashions

We want to do more than sell goods to you. We want to be of real service. We want you to feel that we can take care of your needs, and that we can supply you with perfect fitting, stylish and becoming wearing apparel; whether your requirements are for regular or extra sizes. The measurements which we ask you to supply to enable us to send you a perfect fitting garment—are simple. Before ordering, consult the table and see which measurements will be necessary for you to give us with your order:

Our fashion pages for this fall and winter are a complete exposition of what is most pleasing and becoming in fall and winter styles. Our fashion experts and our clever buyers have outdone themselves in assembling this style-showing for you. You can select everything you need, with the full assurance that it will be smart and stylish and that it reflects New York's best offerings, modified and adapted for you in a practical manner. You will find it easy, pleasant and profitable to shop from our fashion pages. It is just like going through the largest and best equipped fashion establishment, only there is no crowd—no hurry; there is no urging you to buy; you can look over every number as often as you like; and when you finally make out your order, you can expect your selections to come to you exactly as they appear in the book. The prices are an attraction which you cannot fail to appreciate. Careful buying will show you how to get two dresses for the price of one; how you can have a much larger wardrobe than the same amount of money could possibly buy for you at retail; how you can dress more tastefully, more stylishly, from this book than in any other way, for the same cost.

Seal Plush is one of the handsomest fabrics which a well-dressed woman could choose for her Winter Coat. No fabrics used in the making of coats lend themselves with so much richness and beauty to the development of the designers' ideas. Because of its resemblance to genuine Sealskin, many women choose a coat of this beautiful fur fabric in preference to a fur coat which would cost a much larger amount of money. Considering its very high quality and style, we could have asked $22.50 for this coat and even then would have been offering good value. When you buy the coat for $19.50 there is a worth-while saving. The quality of Seal Plush used to make this coat is one of the best that can be had. Has a lustrous heavy pile which will wear extremely well. The coat is the fashionable seven-eighths length with a generous and stylish circular flare in the lower part. The collar is becoming and can be fastened closely at the neck by means of cord loop and plush-covered buttons. If desired, the fronts may be turned back in rever effect, the plush loops and buttons lending an attractive trimming touch. Rich beauty is added by the ornament in festoon effect which extends across the front of the coat, below the waistline. This trimming is made of silk cord with loops fastening to plush-covered buttons which form the center of the plush wheels at each side. From these wheels extend knotted cord ends. A similar ornament is seen across the back at the waistline, below which the coat hangs in graceful ripples to the wide-flaring edge. Coat is semi-fitted under the arms and there is a draped plait at each side in front held in place by the ornament. Sleeves are set into wide armholes and have deep, turn-back cuffs. In keeping with the rich and elegant character of the coat, the lining is of guaranteed satin in a beautiful shade of Seal brown. Fancy pocket in lining.

10B8078 — Prepaid, $12.50 — Boucle Cheviot

Bust Measure, 34 to 46 inches
Length in Back .....45 inches

The Coat styles for the coming season are extremely beautiful and becoming. Not in many seasons has there been anything as attractive as the slightly rounded waistline and the graceful flare skirt, two style features which are seen in so many of the new coats. This coat we picture in color in the opposite page is one of the best examples of this charming new style. It is made of Boucle Cheviot in effective plaid design. Boucle Cheviot is a firmly-woven fabric, All Wool and with a curly nap which somewhat resembles Astrachan Cloth. Has a gracefully shaped collar made of lustrous Seal Plush. Can be worn in two ways; as pictured, with well tailored revers, or with fronts buttoned across the chest in cold-defying comfort. Belt sections are seen around each side extending in tab effect at front and back, as pictured. The tabs are ornamented with braid loops and fancy buttons. The sleeves are cut amply wide at the armholes for comfort and are completed with button-trimmed, turn-back cuffs in pointed outline. A most becoming feature is the full, circular flare which is seen in the lower part of the coat. The graceful ripples give that air of style such as you will see in the more expensive coats. The closing is effected with large, fancy buttons. The cozy warmth of the fabric makes lining unnecessary. There are wide facings of self-material at the inside and all the seams are neatly bound. The inside of the coat is finished with that perfection of detail for which Montgomery Ward & Co. are noted. This perfection of detail has won for us thousands of friends. Every garment we sell must measure up to Montgomery Ward's standard in quality and workmanship.

It closely resembles the more expensive grades of Broadtail Lamb, having the same handsome markings as this valuable fur. The fronts of the coat may also be worn buttoned across the chest when the collar is closed high or turned down in revers as pictured. The length of this coat is very smart. Has a slight dip in back and the fashionable circular flare. The back is plaited so that it hangs in graceful ripples below the waistline. 10B8082 — Prepaid, $9.48 — Striped Zibeline

Bust Measure, 34 to 46 inches
Length in Back.....45 inches

Dependable fabric and captivating style. These two qualities make the handsome coat we offer here an extraordinary value at our price. We show the coat illustrated in color on the opposite page, and we say what we believe: That this is one of the most stylish and most becoming coats ever offered for the sum of $9.48. $13.50 is the retail value, the price that would ordinarily be asked for such excellence. It is a fur-trimmed coat, a consideration which alone entitles it to a higher price. Made of warm, serviceable Zibeline, a fine wool fabric with a slight mixture of cotton in the foundation which adds to the strength and wear-resisting qualities. The coat is the fashionable, new, seven-eighths length, smartly tailored, with graceful and comfortable flare in the lower part. The well-cut, high-standing collar is of the cloth, with deep turn over of Genet, a warm, soft fur in a dark brown shade. The front is fitted from shoulder to bust depth by means of darts which give a trim look to the garment. Over the shoulders extend pointed tabs held with fancy buttons. There is a deep pocket at each side ornamented with a tailor-stitched, button-trimmed flap. At the back there is a square yoke finished with tailor stitching below which the coat is plaited in panel effect. The plaits are stitched to the waist. Button-trimmed, pointed straps extend from the panel to the underarm seam. The stylish belt, across front only, joins these straps with buttons and buttonholes under each arm. The sleeves are set into wide, roomy armholes and have neat, tailor-stitched, turn-back cuffs. Fancy buttons effect the closing. A woman who chooses this coat will have the comfortable satisfaction of knowing that it is stylishly correct according to the latest mode. In addition it is warm and serviceable, and will give long and satisfactory wear. Unlined, the fabric being sufficiently warm and closely woven. The finish on the inside is such as we have reason to be proud of. All seams are neatly bound and there are facings of self-material.

Style–Fabric–Workmanship–Value

Solid Gold or Only Gold-Plated? Can You Tell the Difference?

In buying jewelry or other expensive articles you are almost entirely at the mercy of the man who sells it. Very few people have the expert skill to tell at a glance whether the article is solid gold—gold to the very core—or whether the foundation is baser metal and merely the covering of pure gold.

So it is with a fabric. There are fabrics made of pure wool—every thread pure wool—and there are also **very desirable fabrics** into the foundation of which threads of tough, durable cotton are woven. We need the wool for warmth, for beauty, but we need the cotton as well, for without it the garment would lose **much of its resistance** to hard, everyday wear. So it is largely a matter of taste whether you choose the All Wool garment or the garment made of the tougher, stronger and **not less desirable** fabric. But whichever you choose, you want to know the truth about the fabric, what it is composed of, and as nearly as possible, the proportion of wool and cotton in its weave.

You cannot tell this at a glance—no, not even from the "feel" of the fabric. To do that is the privilege of an expert, just as it takes an expert to tell the difference between the gold and the gold-plated article. You can scratch your jewelry to tell what lies under its beautiful surface. You can tear your beautiful garment to get at the little cotton threads which form so necessary a part of its foundation. But why do these things?

You trust your jeweler to tell you the truth about what you buy and you have faith in his judgment. **You may safely trust Montgomery Ward and Company to tell you the truth, the entire truth,** about every article you buy from them. And so if we say to you "this fabric is part wool and part cotton," you will know that it is the same satisfactory fabric you have worn before and that it has been passed by our fabric experts as **worthy of Montgomery Ward standard.**

Well Dressed—What Does This Mean?

To Wear Stylish Clothes or to Wear Appropriate Clothes?

You are not well dressed if you wear Summer clothes in the Winter time. Nor if you wear clothes made of poor and undependable quality at any season of the year, even though they conform strictly to the newest fashion.

To be well dressed is to wear cool, lightweight, dainty clothes in the summer time—warm, substantial garments in the winter time.

To have a stylish and comfortable suit when the first cold days come—that is of the utmost importance. To be dressed so that you are prepared for any climate and yet not bundled up.

It is not necessary to spend a great deal of money to achieve the distinction of being well dressed. For example, here are two handsome models from our showing of new suits for the coming season. They are unsurpassed for style. They are just what you need to insure substantial warmth in cold weather. In either of these suits, your taste will be admired. **You will be considered well dressed** in any of the suits pictured on the following pages.

And any selection you make from these pages will be a wholesome lesson in economy to you and your entire circle of friends,

Honest Dealing in Honest Furs

This we faithfully promise to give in every fur transaction you make with us.

It is a common custom in the fur trade to call a medium priced fur by a name similar to that of a very expensive fur which it might resemble—for instance—"Brook Mink," which is really dyed "Muskrat" and which only resembles real Mink in color. But the former misleading method of naming furs—calling them by some attractive trade name—is beneath the standard of **honesty** which Montgomery Ward & Co. use as the foundation of their business,—the standard of **honesty** by which Montgomery Ward & Co. have won and held the confidence of their customers for 44 years. In offering reliable, and none but reliable furs for sale, Montgomery Ward & Co. intend to set aside the custom of the fur trade. We intend to call "a spade a spade."

Of course, "Russian Bearskin" is a more attractive name than Manchurian Goat, its real name—but the style, beauty and serviceability remains the same, no matter by what name you call it. We could mention many other rich and beautiful furs worn by well dressed women all over the world, which have been sold for years under similar misnaming. Any one of these furs would have been equally desirable if called by its true name. "Iceland Fox," one of the prettiest and most attractive white furs on the market, is Thibet Goat, electrically combed until it resembles genuine Alaska Fox. But it is not Fox, and to call it Iceland Fox is misleading and not honest. The American woman is too intelligent, too honest in her dealings to demand less than intelligence and honesty from those with whom she deals. And so we repeat, Montgomery Ward & Co. are going to offer their furs for sale with a straightforward statement of what the fur really is.

You may trust the firm which has enjoyed your confidence for so many years to select for you—to sell to you none but the most reliable furs in the market. We expect of our customers the same faith they would have in the man to whom they entrusted the selection of a valuable diamond or a rare work of art. You can select your furs from these pages with our assurance—our positive guarantee—that they are of the best and most reliable of the medium priced furs which the fur markets of the world offer.

Women who ride are very particular about their riding apparel. Style is to them an important consideration, but not less important than comfort. A perfect-fitting habit adds to the pleasure of the rider, whether she rides for exercise or from necessity. Our garments combine faultless style with absolute comfort.

The many small details which add to the comfort of a rider in the saddle are all taken care of in the riding apparel offered for sale by Montgomery Ward & Company. The habits shown on this page follow the designs of the foremost English habit makers who are recognized authorities on all questions of riding apparel.

We call attention to the fact that our riding apparel, if compared with that sold by specialty houses, will be found very reasonably priced—our prices are about half of what you would pay at retail for garments of the same high character.

Our Perfected Maternity Skirt

Here is without doubt the simplest, best and most desirable Maternity Skirt ever designed.

Science has proven the necessity of fresh air and outdoor exercise for the expectant mother. This splendid skirt, with its practical maternity feature, enables you to appear in public without embarrassment, and its purchase is the first step toward better health and greater comfort throughout this critical time.

There are many maternity skirts on the market, but the simplicity, convenience and absolutely healthful designing of the **Montgomery Ward Maternity Skirt** make it, above all, the safest and most desirable skirt you can possibly choose.

Ample additional fullness is allowed at the back of this skirt, arranged in a wide, graceful panel. As this is required, this panel may be let out and adjusted by means of patent snap clasps that are riveted to the waist band, as shown in our small view. This adjustment is practical and convenient. The skirt hangs at all times in graceful, becoming lines and may be worn without alteration throughout all stages of the maternity period. A tape attached at back is tied comfortably at the waistline in front and prevents sagging or slipping out of place.

There is nothing in the appearance to indicate the purpose for which this skirt is intended.

It at all times conceals the figure modestly and gracefully and is free from all devices that might possibly cause harmful pressure or discomfort. Equally appropriate for use after the maternity period.

Read the detailed descriptions below each illustration on this page, telling of the styles and materials in which this Maternity Skirt may be furnished.

You will also be greatly interested in the specially designed maternity dresses and coats shown on pages 89 and 90. The Wardway Patent Petticoat

Madam!

You owe to yourself the pleasure and comfort of one of these **Wardway** Perfect-fitting Patented Petticoats. Made in the **improved way, which is the best and only way** that a petticoat can be constructed so as to fit smoothly without a crease or a wrinkle over the hips. And this desirable perfection of fit is accomplished simply and conveniently.

In the **Wardway** Petticoat there is no difficult or complicated fastening to bother you, no contrivance to get out of order, as you often find in ordinary kinds.

The **Wardway** Petticoat is simple and self-adjusting. When you fasten the clasps in back, the petticoat instantly conforms to the lines of the figure and no further adjustment is necessary. At center illustration we show how the back of this petticoat is gathered on a strong, fine-quality elastic. This elastic expands when worn and takes away the fullness, leaving the back of the petticoat without a crease or wrinkle to mar its perfect fit.

But this is not all. Another desirable feature that you find only in a **Wardway Petticoat**, is the convenient placket fastening made with durable, patent-snap clasps. These clasps are not merely sewn in place. They are riveted through a new perfected "Can't Rip" placket which is made of double thickness and is well reinforced so that it will not rip or tear.

Still another very important feature—remember that our **Wardway** Petticoats as well as every petticoat shown on these pages are cut with a desirable width and flare that is so necessary now with the new, wide skirts which are again fashionable.

Workmanship on these petticoats is of the highest order and cannot be excelled for neatness. Our prices are the lowest you can find for equal quality. Superiority in every detail is assured you. You will be perfectly well pleased with any petticoat you purchase here.

THE "WARDWAY" PATENT PETTICOAT

This is the label you must learn to look for. This is the label which stands for perfect fit, flawless finish, and the highest grade of workmanship throughout.

The Wardway, perfect-fitting, patented, adjustable petticoat. The first time you wear your Wardway, you will decide never to have any other kind of petticoat. The absence of bulkiness at the waistline and the unwrinkled surface over the hips are details which please particular women. Made of pure chiffon taffeta. The quality and the workmanship, in addition to the excellent patented feature, make this a desirable purchase for the woman who wants a petticoat of highest excellence. The small illustration will show you how an elastic belt disposes of the fullness in back. Closing is made with patent fasteners riveted to a reinforced, "can't rip" placket. If you have not yet worn a Wardway petticoat, take this opportunity to become acquainted with one of the best and most perfect-fitting patented petticoats ever offered for sale. The deep flounce is in two sections, the upper section machine corded and the lower section finely plaited with crosswise cordings, as illustrated. This petticoat is cut with a full flare at the lower edge, suitable for the wider skirts which are in vogue this season.

These almost-for-nothing prices enable you to include many of these little everyday necessities with your regular orders

Use these 2c items to "fill in" your shipments. You save a lot on each item—they cost you nothing extra for freight

One cent will carry a postal card from New York to the Philippine Islands. It will carry a pound of merchandise one-seventh of the way from Chicago to New York by parcel post. It will carry one hundred pounds of merchandise six miles on the way from Chicago to Cincinnati by freight. It will run a gasoline engine, 2 H. P., for twenty minutes and it will buy enough rice to nourish a man for eight hours. A cent added to the price of wheat once made one man poor and another one a millionaire.

Truly, the cent is a most powerful thing, for its size. And the prices on this page add further proof to the fact. The articles shown here can be included in your next freight shipment at no additional freight charge, but the saving on them will greatly reduce the freight charges on the other items in the shipment.

There's a saving in every article shown. Only a cent or two, perhaps, on each one, but every cent counts. And then you have these little things handy when you want them. Buying them with your other merchandise not only saves you money, but saves you trouble when you want them quickly. Examine the descriptions and then include some of the articles in your order.

The Baby Has Become One of Our Best Customers

We've been trying for years to make our Infant Department a big success; and we believe we're doing it. We have sent our buyers out early and often to select and arrange the best children's and baby outfits; to do their utmost in buying at the greatest advantage.

We've made up our Baby Department from experts selected for their special knowledge of a baby's needs and a mother's wants. Mothers who are buying here now marvel at the completeness of our outfits; they express their surprise at the quality, the practical, everyday serviceability of the things we send them.

Baby's one of our big customers; we think we know just about what he wants.

Mothers can make their selection from these baby goods pages with the full assurance that there will be more to it than just value—there will be style, care, attention to details, dainty wrapping and packing, in everything you order; not forgetting a considerable saving.

The Clothing Question

It's a big problem in every family; the smaller the income, the greater the problem becomes. To keep everyone well clothed and make the clothing money go 'round would often require some wonderful mathematics, if our clothing sections didn't step in and show you the way out of the difficulty.

SOME people travel to the city to buy, just as others come to this catalogue. They want the latest models and styles. They want the largest possible variety to select from. But buyers from this catalogue not only have the advantages that they save the expense of travel and save on the cost of merchandise, but they have the tremendous advantage of making their selections DELIBERATELY, in the quiet of their own homes and without the hindrance of OVER-PERSUASIVE and anxious salespeople.

Unusual Values

Selected from the Large and Complete Lines Shown in this Book

A well known corset expert writes, regarding this season's Corset Models:

"About one inch less of corset at the waistline than last year, about two inches more above it, and the same amount as last season below it."

This just about describes our latest additions to our Corset Department and we are showing here two of these models. Both are made in the popular pink color so much in demand this season, and they come also in white, should you prefer that. No matter what the style of figure, whether slender, tall, medium, full or stout, you will find in our Corset Department just the model you have been searching for.

In the center of the page there is a value in a Woman's Flannelette Night Gown that is hard to equal anywhere. Each season we buy immense quantities of flannelette Gowns and this style shown here is but typical of the many values in our Flannelette Department that mean worth-while savings.

Four Spirabone Corset Models Noted for Style, Flexibility and Comfort

Constructed upon recognized standards. The result of long, painstaking study. These four models are designed to fulfill the requirements of a perfect corset. Spirabone is the wonderful boning that does it. Spirabone is different from any other corset steels. It is so cleverly woven in interlocking spiral weave that it is flexible as the body, bending with perfect ease; always springing back to its original position, thus retaining the shapeliness of the corset. It is rust-proof and positively will not break. It not only bends backward and forward, but it bends edgewise without breaking or losing shape, a thing that ordinary flat side steels can not do. In the picture above, you will notice the Spirabone steels are in the sides of the corset where the strain is the greatest. Back and front steels are of rust-proof flat steel. These four corsets are the new Fall Models, each being fitted with side steels of Spirabone.

Two Models Guaranteed for Six Months

Ventilating Strip

This is the back view of 32B7012, showing strip of imported tricot. Picture shows a strong open mesh fabric which allows for complete ventilation. At the bottom is an extra wide elastic fabric insert, which causes the skirt of corset to cling closely around the body, yet allows expansion when wearer is seated.

Our Special Six Months' Guarantee

We guarantee that the steels in these two corsets will not break with six months' wear. If they should break from wear within that time, return the Corset to us with the Guarantee Certificate, and we will give you another Corset, free of charge.

How to Order Corsets

Under each illustration you will find the measurements for that particular corset. Read these very carefully. Where we state "Height of Bust," we measure from waist line to a point directly under the breast.

Back Lace Corsets

In ordering, give your Corset Size, if you know it. If not, take your waist measure, tight over the dress. If you are ordering back lace corsets, subtract four (4) inches. This allows for the lacing. Thus, if your waist measure over your dress is 25 inches, for a back lace corset, order size 21.

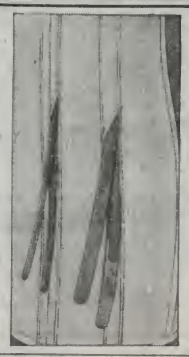
Front Lace Corsets

Take your waist measure tight over your dress. If you are ordering front lace corsets, subtract two (2) inches. Thus, if your waist measure, over your dress, is 25 inches, for a front lace corset, order size 23.

We supply free, with any corset from our entire Corset Department, the right length laces to lace them properly, and of a quality seldom given by other dealers.

A complete line of Maternity Corsets is shown in our Baby section of this catalogue.

Wear-Proof Interlinings



When Corsets wear out, it is usually because the steels break or cut through the linings. While other corsets usually have but two interlinings, these two guaranteed corsets are made with four specially constructed wear-proof interlinings and Duplex rust-proof steels, which are almost unbreakable.

Has strip of imported Tricot in the back for ventilation, and the extra wide elastic insert at bottom, which holds corset snug about the hips, yet adjusts itself to the figure when seated or walking. It produces the straight, plain back, so fashionable at this time. Under lacing is a tongue with four light steels, which prevents the lace coming in contact with the body. Six suspender web hose supporters. Height of bust, above waist, 4½ inches. Lengths: Front clasp, 11 inches; total in back, 20 inches; over hips from waist, 17 inches. A $3.00 retail value.

Duplex Steels

All the steels in these Guaranteed Corsets are Duplex Rust Proof. Duplex Steels mean one light steel over another, in such a way that they support each other. Two light steels put together will be more pliable, and conform to the figure more easily than one heavy steel, and give much better service.

Has six suspender web hose supporters with rubber buttons. Mercerized embroidered lawn trimmed top with draw tape. Rust-Proof Steels throughout. Height of bust above waistline, 5 inches. Tongue under lacing in front, with four light steels. Has Imported Tricot ventilated strip in back, with very wide, heavy, elastic band, shaping the skirt of the corset to the figure and reducing the hips. Six suspender web hose supporters. Sizes, 20 to 30, also 32, 34 and 36.
Weight, 20 ounces.

This is our best Front Lace Corset, especially designed for average and full figures. Fits smoothly over the figure, giving the straight front and back effect. The wide elastic section at the lower back of the corset causes the skirt to fit closely about the figure, yet allows freedom while sitting. Medium high back. No boning directly over the hips. All steels Duplex and positively Rust-Proof. Tongue under the front lacing. Top is trimmed with satin and Val lace. Six suspender web hose supporters with rubber buttons. Has five hook front clasp and 5 retaining hooks at bottom in front. Height of bust above waistline, 4 inches. Length of front clasp, 10½ inches; total length of back, 18¼ inches. A $5.00 retail corset.

How To Adjust Front Lace Corsets

Open laces to full extent down front, so that corset may be clasped around the body easily.
After clasping corset, fasten front supporters only. Bring down corset to position by pulling it down in front, back and sides, drawing up the underwear with the other hand.

Draw in laces at the extreme top of corset and at waistline. This is to prevent corset from slipping up on the body before the lacing is finished.
Then begin lacing at the two lowest clasps and lace corset up to the waistline and down from top gradually. Draw up on the underwear at the top of corset above lacing. Fasten back and side supporters after the lacing is adjusted. Do not attempt to lace the corset close together in front. Opening should be at least 1½ inches.

COMPLETE BABY OUTFITS

On this and the opposite page we are showing five Baby Outfits. While our larger outfits contain, we believe, everything a mother's heart could desire for her baby, yet our smallest outfit is very complete and contains everything absolutely necessary to have on hand for baby's arrival.

In each box you will find just what baby's first garments should be—exquisitely dainty, the softest, sheerest materials—and withal so sensibly made, and the outfits so moderately priced, that mother will be captivated at sight.

Each outfit is wrapped in tissue paper, tied with baby ribbon, and packed in a strong, fancy box, as shown in the illustration at top of this page.

Baby's Health Book

With every purchase of Infants' Wear amounting to $2.00 or over, we will include this very complete little book, replete with valuable information and instruction on the care of baby's health. It is endorsed by physicians and maternity hospitals. We are glad to make this offer, as we believe this little book will become invaluable to you. Whenever you send us an order for Infants' Wear amounting to $2.00 or over, and wish one of these books, be sure to write at bottom of your order, "Send me Baby's Health Book."

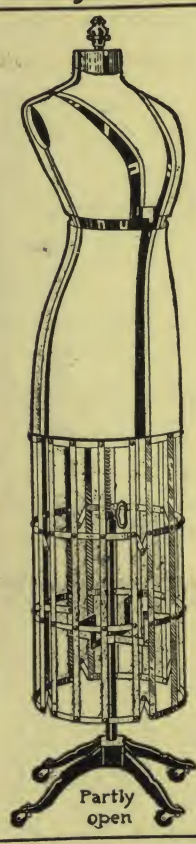
Our sample department is at your service, if you care to see any of our wool, silk, velvet or cotton dress fabrics before purchasing. On some dress goods a sample would be too small to do justice to the goods.



We do not send samples of some lines of goods because the catalogue description is so clear that samples are unnecessary.

Sample you request will be promptly mailed to you. Samples we send are of ample size and are tagged with necessary information. Be sure to give the article number, the name of the goods, and the color, when you ask for samples. However, even without samples, you can order anything from this catalogue with perfect confidence that it will be just as described and illustrated.

IF a man whom you had never seen before and whom you had never heard of, came to you with extravagant promises regarding things he had for sale, you might rightly question his word. The confidence you place in what is said DEPENDS UPON WHO SAYS IT. We come to you with an honorable record that has been forty-four years a-building—a record that is backed by a great and growing business and by an almost unmatched financial responsibility. And that record is your assurance that the promises of this book, and the offerings of this house, ARE TO BE RELIED UPON ABSOLUTELY.

A Special Coating Serge

COLORS:

Smoke Gray, Dark Cadet, Brown, Navy, Black, Wine

State color wanted.

16B1050 We offer an unusual value in this elegant, all wool serge weave. Coating Serge comes between French Serge and Storm Serge in weight. It is finished smoother than Storm Serge, and is softer to the touch. Very similar to Serge for Men's clothing, but not quite as heavy. This is a beauty, and a good quality serge at this price. **Samples mailed on request.** Weight, per yard, about 6½ oz.

98c A yard

Width, about 50 inches

All Wool Coating Serge

COLORS:

Wine, Black, Navy, Dark Green

State color wanted.

16B1051 A value in coating serge that is probably unrivaled. A coating serge has more weight than a French serge and is more dressy than a storm serge. A mill famous for its fabrics makes this serge for us of pure wool yarn. Extra width and quality of fine appearance. A serge that will make up well. **Samples mailed on request.** Weight, per yard, about 7½ oz.

55c A yard

Width, about 42 inches

All Wool Vigoreaux Serge

COLORS:

Medium Gray, Dark Gray

State color wanted.

16B1055 This suiting comes in gray mixtures only. It is almost as heavy as storm serge. An exceptionally durable fabric, because it is made of long, staple, pure worsted yarn. It is a bargain, a special manufacturer's overstock, bought up at a sacrifice. Gray mixtures are very neat. They do not soil easily. This one is something exceptionally good, one of our best dress goods values. **Samples mailed on request.** Weight, per yard, about 6¼ oz.

75c A yard

Width, about 41 inches

Pure Wool Vigoreaux Serge

Plain Mixed Colors: Medium Light Gray, Medium Dark Gray or Medium Tan.

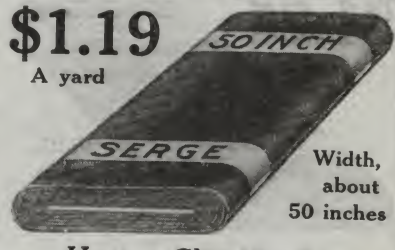
State color wanted.

16B1058 A good, pure wool, imported suiting, in plain mixtures. It has a moderately fine serge weave, soft in appearance, and soft to the touch. A style always in demand where both neatness and good service are wanted. Mixtures do not soil easily. These soft yarn serges can be crushed without creasing and are, in every way, fabrics of merit. This grade would cost you from 90c to $1.00 at retail. Gray mixtures are usually favored by elderly ladies. Soft, good fabrics like this are especially desirable. This material is of moderate weight, suitable for any season of the year. It will wear splendidly. **Samples mailed on request.** Weight, per yard, about 4½ oz.

$1.68 A yard

Width, about 56 inches

Imperial Dress Serge



COLORS:

Navy or Black.

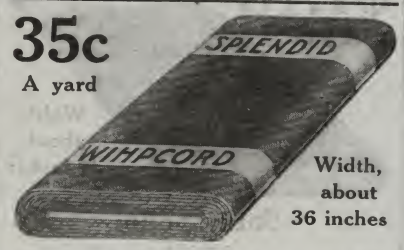
State color wanted.

16B1088 This is our finest grade of all wool serge; a dressy cloth, of the choicest material. Made by domestic mills and equal to the imported serges retailing at from $2.50 to $3.00 per yard. On the order of coating serge. It comes between the French serge and the storm serge weaves. Rather fine twill, close, firm weave; and soft, like men's unfinished worsted. Will not become shiny in use. It is a high-class fabric, and like all serges, is always immensely popular. **Samples mailed on request.** Weight, per yard, about 10 oz.

$1.19 A yard

Width, about 50 inches

Heavy Clay Serge



COLORS:

Brown, Dark Cadet, Light Plum, Wine, Navy, Black

State color wanted.

16B1161 A serge of splendid quality. One of the most attractive suitings we list. Clay serge has a rather wide twill, and is heavier than the average storm serge. Similar to coating serge, but with extra body and weight. This fabric is made of soft, pure wool, and closely resembles the imported serges that retail at double the price of this. If you wish a nobby suiting that can be worn almost any season of the year, you should purchase this Clay Serge. **Samples mailed on request.** Weight, per yard, about 9 oz.

It is an extra wide cloth, and will give splendid service. Weight, per yard, about 8 oz.

Half Wool Gabardine

It is a soft, twilled fabric, woven somewhat similar to whipcord; a more dressy suiting than storm serge, but of about the same weight. This one has cotton warp and worsted filling. In appearance it is quite like the all wool goods, but is firmer and will wear better for having cotton threads under the wool. A splendid, medium priced suiting. Weight, per yard, about 6 oz.

We Want Customers—But We Also Want Friends

Like every one else, you can recall dealings you have had where the deal was nothing more nor less than a cold exchange of money for goods—the deal didn't mean a thing more to you than that you were getting something you wanted and that you paid a certain price for it.

Then again, you have done business with people and with business houses who gave you a little more than just merchandise for your money—you went away with your goods with a feeling that you had received a little more than you really came to buy—there was a friendly word; a good natured smile; a cheerful pat on the back, or a hearty handshake—something that made you feel that that particular business deal had been pleasant and satisfying, and that you had received a little **extra** measure of good will and sincere value. That's the way we should like to have you feel each time you receive an order from us. We want to do things so well, please you so much, and satisfy you so completely that you will have such a friendly feeling toward us—that when you write an order you will want to send it to Montgomery Ward & Co. If we can accomplish this, we will have achieved success indeed.

Great Values — Cotton and Wool Battings

Our Surprise Batt

SIZE, ABOUT 72x84 INCHES

Weight, about 3 lbs.

39c

Each

17B7920 A wonderful batt for this price. About as good as we have sold other years for half a dollar. Nearly all long staple cotton. Snowy white, thick but soft; a batt that will really surprise you when you see it. We bought this batt when the price of cotton was at its lowest point. Among the many samples we examined there was no other batt nearly so good as this. It is really exceptional. All batt manufacturers are eager to secure the contract for the immense quantity we sell. Our Surprise batt is a good example of the low price we can make, owing to our purchasing in such large quantities.

Special M. W. & Co. Batt

SIZE, ABOUT 72x84 INCHES LAID OUT

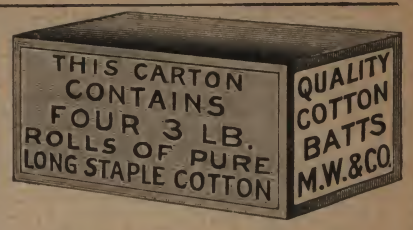
Weight, about 3 lbs.

55c

Each

17B7925 So fine a comforter cotton and such a good value that we list it under our own brand M. W. & Co. Special. This batt is absolutely all long staple cotton, without a particle of waste or short stock. It is not a bleached cotton, but in the pure natural state. Chemical bleaching impoverishes the cotton; it never has the same life and resiliency after bleaching. This is a creamy white, beautiful cotton, that is a pleasure to handle. Makes up to the best advantage inside the finished comforter. This is a 75c retail batt. We recommend this batt with absolute confidence. It is the best 3 lb. batt we ever placed on sale. It comes in paper bags, completely covered, so will be received fresh and in perfect condition.

A New Comforter Cotton Fluffy Down



SIZE, ABOUT 72x84 INCHES

Weight, about 2 lbs.

69c

Each

17B7940 This is a foreign cotton, with so marvelous a resemblance to wool, that most everyone mistakes it for wool. One feature that makes it especially good for comforters is, that it is nonabsorbent. It does not absorb moisture, so will not become hard and lumpy, but always retain the softness and lightness so desirable in a comforter. It is much less expensive than wool, and having so nearly the qualities of wool, will undoubtedly be an immensely poular filling, as it becomes better known. This new batt is being retailed at some stores at $1.00. If you want a very good comforter filling at less than half the price of wool, by all means try our new Fluffy Down batt. Weight, about 2½ pounds.

17B9176 This is one of our special values in wool and cotton mixed blankets. Our offering this year is especially good. We are putting more wool into our **Warm Clad** blanket now than ever before. Other features of this, and all our blankets, are strength, texture and warmth, the essentials we look out for. A Fine Blanket at $3.98 Per Pair

Size, about 70x80 Inches. Weight, about 5 lbs.

17B9181 This is a Silver Gray Blanket, wool and cotton mixed, that we are sure will please every purchaser. For softness, thickness, light weight and general attractiveness it is equal to much higher priced goods. It might be easily mistaken for an eight dollar blanket. It is one of our best values at a medium price. A mill, very anxious to have their blankets represented in our catalogue, made us a specially low price on this splendid article. Many high priced blankets contain a mixture of cotton to give strength. **Pink or light blue borders. State color wanted.** Shipping weight, 6 lbs.

Un-napped, Gray, All Wool Blankets

SIZE, ABOUT 70X80 INCHES. WEIGHT, ABOUT 5 LBS. **Price, per pair, $4.98**

17B9185 If you wish to sleep next to an all wool blanket, this is the blanket to buy. Most woolen blankets have a nice, fleecy surface, because people want it. But friction soon wears the napped fleece off and when such a blanket is used for sheets the service may be disappointing. This blanket will give extra service; friction will not hurt it, because it has no loose surface wool. **Pink or blue borders. State color wanted.** Shipping weight, 5½ lbs.

English Made Blankets
Silver Gray—Pure Wool

Price Per Pair $5.98

The wool is not as fine and downy as in some others, but it is absolutely pure wool and of long enough staple to give the strength and wearing qualities that we specially recommend. Made on up-to-date American looms by English operators who know how to make good blankets. A 6 lb., pure wool blanket at this price is a bargain at this time. **Silver gray, blue or pink borders. State color of border wanted.** Shipping weight, 6½ lbs.

If you wish a really good article and prefer gray blankets to other colors, you will be delighted with this article. **State color of border wanted.** Shipping weight, 6½ lbs.

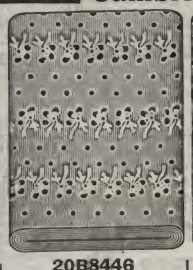
A New Idea in Semi-finished Embroidered Corset Cover, Each 49c



The semi-finished, embroidered corset cover was created to overcome the objections to home-made and ready-made corset covers. The armholes are already cut out and finished with an embroidered scallop, which the laundries will not break or rip. The back is as attractively finished as the front. The open picture shows you the simplicity of this corset cover, All you have to do is to attach the shoulder straps to the arm holes and insert the draw strings. Be sure to state pattern number and bust measure when ordering. Sizes, 32 to 44. Price, each 49c

So Efficiently Adjustable That it Gives You Your Very Image to Work on—Regardless of How You May be Proportioned

This dress form is independently adjustable throughout its 14 sections. It will accurately duplicate measurements and proportions of any feminine figure, regular or not, giving the exact contour of your own figure perfectly.

Note the illustration of the many possible adjustments of the bust, waist or hips, independent of the rest of the sections. This shows why the **Independent** can make an exact duplication of any feminine figure from the neck to the skirt.

Changes in style, no matter how radical, cannot affect its usefulness. It will be just as useful to your granddaughter as it is to you. Once set, the Independent stays set, preventing any possible chance of accidental shifting of any section of the form while using. You can alter, drape, fit and pin as much as you please—this form will always stay set.

Neck may be enlarged; shoulders made broad, narrow or sloping; bust made full or flat, high or low as desired. A short waisted or long waisted figure may be produced and the waist may be made any desired size. The hips are made in six sections to allow of any adjustment and will reproduce even the figure with one hip enlarged. The skirt is also adjustable to any desired height and may be made either straight or flaring, as fashion dictates.

If you don't know, read below:

THE chart on the right was compiled by an expert on shoes and shoe sizes. Don't hesitate to use it. If it is difficult for you to secure a fit or you have forgotten the actual size you wear, you can find out by following these directions:

First remove shoe, then place your foot on the chart. Do not put all your weight on the foot, but let it rest natural. The figures at the end of the foot indicate size required. State whether the foot is broad, medium or narrow. After securing your size by this method, you can continue to reorder.

Our policy has always been and will always be, to give our customers the actual size called for. All our shoes are numbered on the boxes and on the shoes, so that in purchasing a pair of shoes from us, you may depend upon getting exactly the size ordered, marked in plain, understandable figures.

FITTING RUBBERS—To avoid trouble and annoyance in fitting rubbers, it is advisable to give us, when possible, the exact size printed on the inside of the shoes or slippers to be fitted. Then, in addition, if you will place the shoe on a piece of plain paper and draw an outline of the sole and heel, and be sure to mention whether it is a high or low heel, we can be sure of the size you want.

It is **very** important to mention the height of the heel, as a high heel rubber will not fit a low heel shoe, and a low heel rubber will not stay on a high heel shoe.

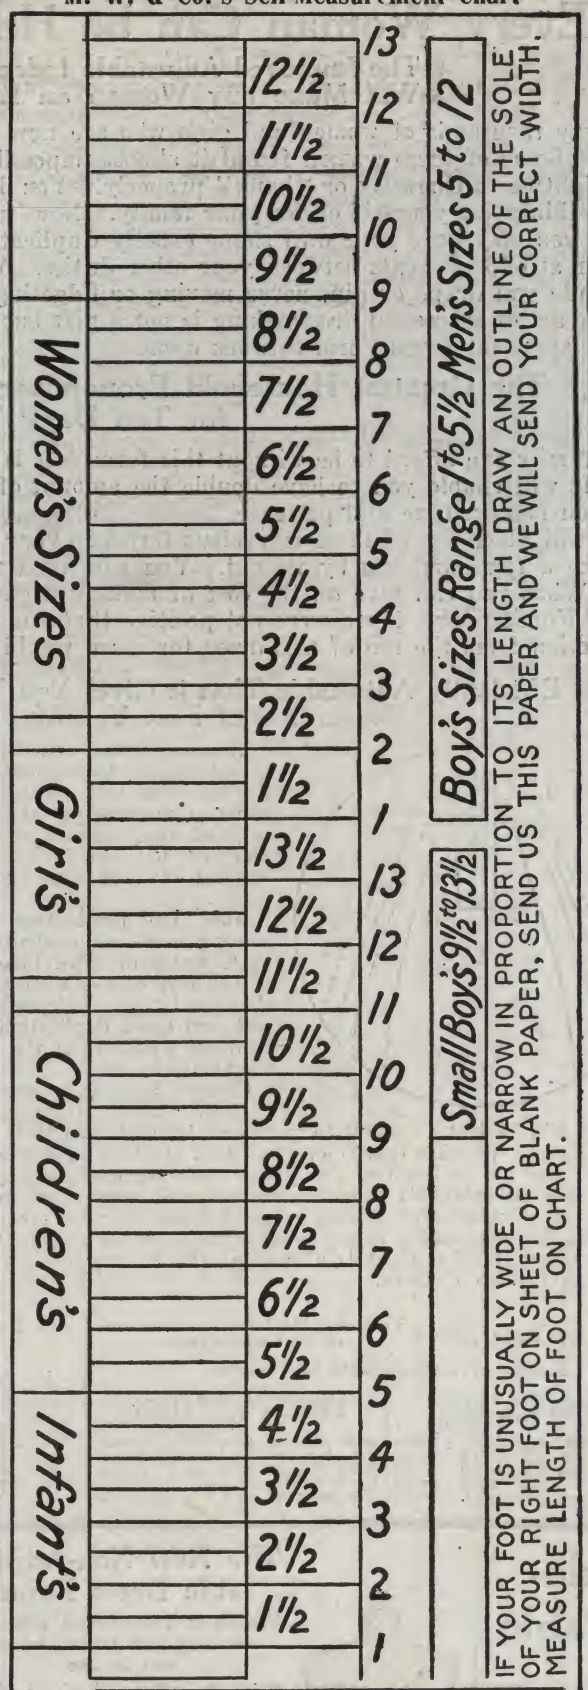
We are constantly striving for ways and means to make your dealings with us pleasant and satisfactory. To this end, under each rubber we have carefully described how they should be ordered to insure a proper fit.

In a general way, this can be satisfactorily handled if they are ordered as follows:

All heavy arctics and overshoes should be one **whole** size larger than shoe worn.

Light arctics, one-half size or a whole size larger, as noted in each description.

Light weight rubbers are fitted a whole or one-half size larger or same size as the shoe, according to the description.



Rubber boots and overshoes for wool socks are usually fitted the same size as shoe worn. Heavy overshoes for felt boots should be one whole size larger than felt boots.

Explanation of sizes and widths. Widths in leather footwear: D, medium; E, wide; EE, very wide. Where quoted full or wide widths only, they are EE width.

Scale of Sizes:

Small Girls'	6 to 8

The World is Our Market

Prominent Shoe Manufacturers Recognize Our Distributing Supremacy

The human element merits as much consideration in shoe manufacturing as in other commercial enterprises. Organized efficiency in the shoe factory is a direct result of careful, persistent watching on the part of **active** principals, proprietors or owners, who seek, train and develop the most skillful workmen and, by **close personal** contact with the business, devise ways and means to reduce manufacturing expense to the absolute minimum. It is this **proprietary interest** that eliminates waste effort, waste material, waste power—in fact all lost motion and every item of needless expense. Not only is waste sought out and eliminated, but constructive methods are constantly employed to place factories on the most economical basis.

Our Position

The manufacturer's profit on each pair of shoes is so insignificant, that were we to make our shoes, the lack of this close personal proprietary supervision would increase their cost to more than we pay now. Keen competition in the shoe industry combined with our position as one of the most powerful shoe distributing houses in the country is the dual force which keeps our prices of shoes down to the absolute minimum.

Every progressive manufacturer understands that **full-capacity** volume keeps overhead expense down, and recognizing our tremendous outlet, many of the largest shoe manufacturers in the country are continually bidding for our business, seeking to be numbered among the sources of supply for Montgomery Ward & Co.

It is with factories of this kind we place our orders. It is with the **owners** of these factories, men who devote their lives to the making of shoes, that we evolve ways and means of getting shoes to our customers at the lowest possible cost.

The materials must be strong enough to withstand the conditions surrounding our customers. Styles must be up-to-date, but must be constructed to give comfort as well. The hidden parts of the shoes are brought to light and thoroughly analyzed. The adaptability of each separate shoe is considered from every standpoint.

Wear—Comfort—Style—Low Price

are not empty selling phrases used to entice customers to buy. They are the standard on which every shoe must be built. All four must be equally apparent. Under no circumstances will one be sacrificed for another.

Through years of contact, we have established a clear, well defined policy of value-giving. Never have we lost sight of the benefits derived from the good will of satisfied customers.

At the inception of our shoe department, we adopted the policy of small profits and big sales rather than big profits and small sales. The result of this policy is evident in the present magnitude of our shoe department when compared to its modest beginnings.

We will follow this policy in the future as persistently as we have in the past.

Increased Efficiency

To materially improve our service to you, we have established an **Inspection Department** to thoroughly examine every pair of shoes that enters our store. Shoes with flaws in construction or material are immediately returned to the factory. We accept no inferior merchandise.

NO longer is there "country style" and "city style"—except where old-time buying methods prevail. Here we bring the city to the country—QUICKLY AND CONVENIENTLY. When you buy from these pages you do not have to wait for some slow moving local stock to be "reduced" before you are offered the new and up-to-date things—which then are no longer new and up-to-date. In the important matter of TIMELINESS we serve best.

A Typical Money-Saver

from our shoe section, which is full of bargains on every page. Every shoe shown has been built UP to a standard and NOT down to a price. In every instance they prove conclusively that we have sought out the best that could be had at the least possible cost. QUALITY is our watchword. Decide on the shoes you want to buy and be assured that no matter what pair you choose they will be comfortable in fit, of the best quality possible, for the price, and will give satisfactory service.

Unusual Values
In the regular shoe section you will find other values equally attractive in fashionable and practical footwear.

An actual test will prove this statement.

24B985—Black Kid, Sensible heel and toe $1.75

HERE IS A NEEDLE—with an eye of gold and a POINT OF STEEL. It's a little thing—a trivial affair. But make one needle yourself. You couldn't do it in a week—at the cost of many dollars. Yet a fraction of a cent will buy one—better than you could make. The production of them by the millions cuts their cost to a minimum. IT'S BIG VOLUME THAT BRINGS DOWN THE COSTS. Our prices are low because our volume is big. That's the point.

Toys are a never-ending source of pleasure to them. Get them a goodly assortment from our toy pages. Dozens of them don't cost more than a few cents apiece; many are practically unbreakable; a great many are very instructive; others simply are entertaining—all are interesting.

The old-time jumping-jack and the newest mechanical toy are all represented in our Toy Section—it's bigger and better than ever this year, in spite of unfavorable conditions.

THIS CATALOGUE IS our messenger. If we could come PERSONALLY to you—and touch hands—you would give what we had to say thoughtful consideration. But in that way, at best, we could bring only a few things to show you. Here we bring the choice of the markets of the world to your door. In no other way could you get the great variety to choose from. If we are handicapped by the lack of personal touch, it is more than offset by the VARIETY of our wares and the ECONOMY of our prices.

Conditions in dairies, mines, fisheries and on farms have a detrimental effect on ordinary rubber boots. Our guaranteed rubber boots are pressure cured, which insures the durability and elasticity necessary to withstand such conditions. The process welds the various parts of the boots into one composite whole, which it is almost impossible to pull apart. The strength of the rubber compound is increased, porosity removed; it is made absolutely water-proof and wearing quality greatly increased.

WARD'S SIX MONTHS GUARANTEED SHOE

THE GREAT SERVICE SHOE

ENDORSED BY THOUSANDS OF SATISFIED WEARERS

Testimonial

Gentlemen: Please let me know if you still keep the six months' guaranteed shoe, Number U1820, Catalogue 81. I got a pair Feb. 1st one year ago and have been wearing them ever since at the brick yard and can wear them awhile yet. I will send for another pair soon if you still have them. They outwore any shoe I ever had. This is the second pair I have worn. The first pair wore over a year also.

Name and address of writer will be furnished on request.

Our Six Months' Guarantee

Expert workmen and high grade materials have combined to produce this shoe of six months' insured service. If for any reason due to defective material or workmanship they fail to give satisfaction for a period of six months from date of purchase, return them with guarantee and we will send you a new pair in exchange.

Testimonial

Gentlemen: I wish to say a few words in commendation of your six months' guaranteed shoe. It is by far the best shoe I ever wore, and instead of the words "six months" you could safely and honestly insert in lieu thereof "nine months." My work of mason and concrete gives the strongest shoe the most severe test, hence my proof.

Name and address of writer will be furnished on request.

Advantages of Goodyear Welt Shoes

Goodyear Welt sewed shoes are neater, stronger, more durable, comfortable and stylish than either nailed or ordinary machine sewed shoes. *Goodyear Welt stitching is identical with the old-fashioned method of hand sewing used by our forefathers,* making the insoles smooth and free from nails, threads, tacks, and other imperfection, thus completing a shoe that is *clean, pliable* and *easy.* That's why they're so comfortable and superior to ordinary shoes. Benefactor shoes are Goodyear Welt sewed, made from fine gun metal calf. They have leather insoles and counters, full double soles and full vamps. That's why they give exceptionally good wear. Widths: D, E or EE. Sizes and half sizes, 5 to 12. Shipping weight, about 47 oz.
